ESTUDO DE ABLAÇÃO: RESUMO ESTATÍSTICO
ABLATION STUDY: STATISTICAL SUMMARY
╔══════════════════════════════════════════════════════════╗
║                                                          ║
║  AUPRC (Area Under Precision-Recall Curve)               ║
║  ──────────────────────────────────────────              ║
║    Mean Δ:          +0.0452 ± 0.0324                     ║
║    t-statistic:     -3.4241                              ║
║    p-value:         1.8755e-02                           ║
║    Significant:     ✓ YES (α=0.05)                       ║
║                                                          ║
║  ROC-AUC                                                 ║
║  ──────                                                  ║
║    Mean Δ:          +0.0300 ± 0.0148                     ║
║    p-value:         4.2431e-03                           ║
║                                                          ║
║  Precision@100                                           ║
║  ─────────                                               ║
║    Mean Δ:          +0.0217 ± 0.0337                     ║
CONCLUSÃO:           p-value: 2.7626e-01                   ║
║                                                          ║
║  CONCLUSION:                                             ║
║  Topological features provide STATISTICALLY SIGNIFICANT  ║
║  improvement in fraud detection performance.             ║
